

Yanney Software provides software development and computer consulting services. We have extensive experience developing application in Windows, UNIX and DOS using C, C++, Visual Basic and Java.

Yanney Software can help you research your project, perform a feasibility study and with the overall design and implementation of your system.

Complete web site design services are also available. With the combination of software and graphic design expertise we can make your web site or web application both visually effective and functionally robust.

Computer Training is also available from Yanney Software.

QUALIFICATIONS

- Bachelors and Masters Degrees in Computer Science
- Over 15 Years Experience
- Strong Analytical Skills

- Creative Problem Solving Capabilities
- Project Leadership, Team Member and Individual Programming Experience
- Small and Large Projects (100,000+ Lines, 100+ Classes)
- Extensive Manufacturing Execution Software Development including Scheduling, SPC, Document Management and OPC

SKILLS

- C++, C, Visual BASIC, Java
- SQL, HTML
- Windows, UNIX, DOS
- COM, Active-X Controls
- GUI Development
- Database Development
- Visual Development Tools and IDE's
- Multi-platform Development (XVT, XI)
- Object-oriented Development
- Operations Research
- Computer Graphics
- Artificial Intelligence and Neural Networks
- Compiler Theory and Design

EXPERTISE

Using the latest tools and technologies Yanney Software can quickly develop a prototype. By applying good software engineer practices, you will have well-written and documented code that can be more easily reused and enhanced beyond the prototype.

If you have a large project, a complex task or require an efficient solution to a difficult problem we have the skills to solve these problems. Yanney Software has the experience and the expertise for developing robust algorithms that utilize advanced computer science concepts and techniques.
